

## Optics Labs

Last Updated Tuesday, 31 October 2006

The Optics labs have equipment for studying lasers, lenses and optical phenomena. Each room has an optical workbench, a Dell workstation with scientific and image capture software, and a scanner. There is a wealth of equipment including PC-connectible cameras available for checkout from the stockroom.

The labs are available for use during the morning and afternoon outside of class hours. For more information, or to sign out a key and get started in the labs, visit the stockroom on the third floor of building 76.
