

PC Lab

Last Updated Tuesday, 24 October 2006

The PC lab is home to Dell Optiplex computers with wide-screen flat panel displays, 20" Intel iMacs, and a scanner. The computers have access to a large collection of scientific software, such as Image/J, Mathcad, Matlab and RSI ENVI+IDL. They also have standard office productivity software, making this lab a great place to work on reports. For more information on the software installed here, visit the [PC Lab Software](#) page.

The iMacs require a CIS account to log in, and the PCs require a special login that is provided upon request.
