

UDIP Lab

Last Updated Tuesday, 31 October 2006

Undergraduate Digital Image Processing (UDIP) Lab

The UDIP lab is a teaching lab, populated by 20" G5 iMacs. There is a teaching computer at the front of the room, which is connected to the projector. When not in use, the projector screen can retract into the ceiling to allow access to the double-wide whiteboard. Each student's computer can be remotely controlled by the teaching computer. CIS also provides wireless Internet access to registered computers in this laboratory. When class is not in session, this lab is open to all CIS students, faculty and staff. For more information on the software installed here, visit the [Mac Software Page](#).
