

Computer Accounts

Last Updated Thursday, 23 August 2007

In order to get a CIS computer account, you must obtain approval through the proper channels. The general people who approve accounts are as follows:

- Students including grads: Faculty Advisor
- Researchers: Head of Group or Stefi Baum
- Staff: Supervisor

Before you can get a CIS computer account, you must also read the following document fully. As well, you must fill out and sign the final page:

- CIS Computing Guide (doc)(pdf)

After we have received the appropriate approval, your account will be generated. This account will be the same as your RIT account (ie. abc1234). You will just have to stop by and bring the last page of the CIS Computing Guide signed.

Then we'll reset your password for you to set. Your computer account enables you to:

- Send and receive email from a user@cis.rit.edu address
- Log in both locally and remotely to the UNIX workstations in the UDIP and DIP laboratories
- Access Samba shares from CIS-owned computers
