

## Mac OSX Setup

Last Updated Thursday, 08 November 2007

MacOS/X 10.4 Printer Setup (PLEASE NOTE THESE INSTRUCTIONS DO NOT APPLY TO GUPPY)

- Open and unlock the Printers control panel.
- Click "Printing" and click the + button.
- Click IP Printer at the top of the Printer Browser window that comes up.
- Choose LPD in the Protocol field.
- Enter the print server and queue from the information at the top of this document.
- Name the printer as its queue name and enter its location.
- Choose the appropriate printer driver and click Add to complete the printer setup
